OpexNOW

E-METERAI STAMPING PLATFORM

e-Meterai stamping, built into the way you already work.

Send a PDF from your ERP through one API, or upload it in the console. OpexNOW stamps it with Peruri e-Meterai, exactly where it belongs, every time.

HOW IT WORKS

1

Send the document

Your ERP posts the PDF to the API with a template, or you upload it in the web console.

2

The template finds the spot

The stamp follows a keyword such as "Remarks" or sits at fixed coordinates.

3

Receive the stamped PDF

You get the stamped document and its serial number, and every request is logged.

WHY TEAMS CHOOSE OPEXNOW

Template-based placement

Anchor to a keyword or pin exact X and Y. Preview the result before you save.

Rejected before it costs you

A document that does not match its template is refused, and no stamp is used.

One API for any system

ERP, warehouse system or in-house app: the same call, with no per-ERP connector.

A console for everyone else

No ERP? Upload a document, pick a template and stamp it in minutes.

TWO WAYS TO USE OPEXNOW

From your ERP

One REST API. Authenticate, post the PDF with a template, receive the stamped result.

```
POST /stamp
{ "template_id": "tmpl_...",
  "document_base64": "JVBERi0x...",
  "mode": "sync" }

{ "status": "signed",
  "serial_number": "..." }
```

Without an ERP

Use the web console. Nothing to install and no integration to build.

1. Choose a template
2. Upload the PDF
3. Download the stamped PDF

BUILT-IN SAFEGUARDS

Staging and production

Test safely with a daily staging allowance, then go live with your own Peruri credentials.

Audit trail

Every request is recorded with its status and serial number, ready for review.

Client separation

Each client has its own templates, API keys and job history.

Clear error messages

A rejected document comes back with a reason your team can act on.

See OpexNOW on your own invoices.

Bring a few sample documents and we will show the stamp landing where it should.
